RECOVERY POTENTIAL

50%

THE STAKES

The Cost of Inaction

Staying manual is an active decision to burn $54,375 every year. This is not just "busywork"—it's a drain on your culture and your capital.

$54,375

ANNUAL WASTE

By automating the high-impact workflows identified in this report, you reclaim 543.75 expert hours to focus on strategy, not basic processing.
Payback-first AI. No science projects.

AI is not a strategy—it is leverage. We believe outcomes beat activity. If it doesn't reduce cost, save time, or lower risk, it's not work; it's entertainment.

Our approach is simple: Baseline the workflow, choose the high-payback intervention, install guardrails, and measure the math. Every week.

THE PORTFOLIO

Strategic Priority Matrix

Portfolio visualization unavailable

Impact vs. Viability. We focus on the high-payback, high-readiness workflows in the top right.

Outcomes beat activity. Most teams start with the "smartest" ideas. We start with the ones that pay back. Our matrix categorizes tasks by their immediate recovery potential and technical readiness.

Standard repeatable workflow with measurable savings potential.

NEXT STEPS

Move from estimates to outcomes

The AI Payback Sprint

The math above shows the opportunity. The Sprint makes it real. In 30 days, we baseline one critical workflow, install the guardrails, and prove the payback. No "transformation" fluff. Just outcomes.

- Confirm the baseline (Time, Cost, Accuracy)
- Install Guardrails (Ownership & Safety)
- Deploy 30/60/90 Day Implementation Path
